

환자 성명:

ID:

병동:

성별:

연령:

처방의:

S-위 ESD     S-식도 ESD

Operating endoscopist:

Sedation:  yes  no , Degree:  drowsy  light  moderate  deep

Antispasmodics:  yes  no

Past (medical) Hx :

Anti-thrombotics :  yes (drug: stop:  yes, \_\_\_ days ago  no  no  not confirmed

Procedure type:  ESD     ESD+Snare ( \_\_\_% submucosal dissection 시행 후 snaring 시행)

Description of the lesion

1) Histological diagnosis by forceps biopsy:  Adenoma  Differentiated EGC  Undifferentiated EGC

2) Location:

3) Size:            x            cm            (Size of resected specimen:            x            cm )

4) Shape:

5) Ulcer:  No  Yes

6) Other finding:

Procedure

1) Marking & cutting:  Needle knife

Dual knife ( dissection도 dual knife 사용  knife 2개 이상 사용 기준 해당)

2) Submucosal injection fluid:  Normal saline+epinephrine+indigocarmine

Normal saline+epinephrine+indigocarmine+glycerol

3) Submucosal dissection (main dissection knife):  IT2  Dual  Flex  Needle  Hook

Knife 2개 사용 이유:  Fibrosis  Location  Adenoma size ≥ 4 cm

4) Fibrosis:  No  Yes

5) Specimen retrieval:  Net  Tripod forceps

6) Comments (describe procedure in detail)

Outcome:  En bloc  Piecemeal

Hemostasis

1) Bleeding during procedure:  Minimal  Moderate  Significant

2) Bleeding after submucosal dissection:  Minimal  Moderate  Significant

3) Hemostasis method:  Coagrasper  Clipping  APC

Immediate complication    1) Uncontrolled bleeding:  No  Yes

2) Frank perforation:     No  Yes

3) Other event (specify):  No  Yes

결론 및 진단
